A life-changing test is just minutes away.

In just 5 minutes, RightEye's EyeQ™ test will provide meaningful information about your functional vision that could transform your life. If you have questions or would like more information, talk with your provider.

# KNOW YOUR EyeQ

**The vision test that could change your life.**

## What is functional vision?

Life's most basic activities rely on your eyes, eye muscles and brain working together to navigate the world:

- Driving a car
- Walking up and down stairs
- Playing a sport
- Reading a book
- Watching a movie
- Maintaining your balance
- And more

**It's this eye-muscle-brain connection that creates your functional vision.** And when your functional vision is out of sync, it can impact your life in big and often unexpected ways.

# A More Comprehensive Eye Exam

## What does a functional vision test measure?

RightEye's EyeQ test has been cleared by the FDA and uncovers issues with your:

- Eye alignment
- Object tracking
- Dynamic visual focusing
- Eye movement
- Depth perception
- Eye-hand coordination
- Visual perception
- Visual integration

## 20/20 eyesight does not mean perfect vision

Today's standard eye exam only checks your eyes' physical health and ability to focus. It looks for disease (such as glaucoma and cataracts) and measures your ability to see 20/20. It doesn't, however, evaluate how well your eyes move or work together (or function).

**Focus:** How clearly your eyes can see a stationary object (using an eye chart)

**Health:** The physical condition of your eyes (checking dry eye, glaucoma, cataracts, etc.)

**Function:** How well the eyes and eye muscles work together to send signals to your brain

## DID YOU KNOW?

- 50% of vision disorders go undiagnosed
- 90% of all concussions result in eye-movement dysfunction
- 1 in 4 children has a vision problem that affects learning
- Most functional vision issues are addressable with simple exercises
